

YOUR INTERNET LEGACY

www.thrings.com

15 years ago you did not have a computer - now you have a PC, an iPad and a Smartphone. You use email, Twitter, Facebook and internet banking. Your photos, music and films only exist on your hard drive and your Paypal account has a healthy balance after some online trading. You don't need to buy stamps or go out to go shopping - your life is under control.

But what would happen if you had an accident or suffered a serious illness and had to rely on other people for weeks, months or indefinitely? Or, in the worst case scenario, what would happen if you were to die?

- Would your friends or relatives know what to do with your internet legacy?
- Would they know what you wanted to happen to it?
- Would they know where to look or even what to look for?
- Would you want your internet assets dealt with or deleted?
- What would your internet provider be able or willing to do?

These are just some of the issues that increasing use of the internet raises and has only just begun to answer. Here at Things we have thought through the issues you need to think about and have produced practical solutions such as:

- A fact sheet on password safety.
- Advice to enable you to create and update your own databank with advice on how to use this safely.
- Advice on setting out your wishes clearly if you lose mental capacity or die.

May I take this opportunity to thank you for all your help. We both really appreciated your kind manner and evident professionalism.

The Internet is the most important single development in the history of human communication since the invention of call waiting.
